PRACTICAL NO 3 : OPTICAL CHARACTER RECOGNITION (OCR) FOR HANDWRITTEN TEXT

```
from PIL import Image  # Fixed: 'image' must be capitalized as 'Image'
import pytesseract

# Fixed typo in executable name ('tessersct' -> 'tesseract')
pytesseract.pytesseract_cmd = r"C:\Program Files\Tesseract-OCR\tesseract.exe"

# Used a raw string r"..." and renamed the variable to 'img' to avoid shadowing the module
img = Image.open(r"D:\tyds2-38\images.png")

text = pytesseract.image_to_string(img)

print(text)
```

Output :

Dear Samra,
T have been very dood this
year and have been thinkin
of what I would like for
Christmas.
\. leao
tL. licycle
. RURRY
LT am very excited for your
Visit and will leave out Some
Snacks Lov you and your
reindeer.

love.
